

Overview

'General Purpose' is a cable lubricant for telephone, power and fiber optic cables. Reduces friction up to 80% facilitating the work and protecting the cable.

Suitable for both civil, industrial installations and fiber optic installations.

Due to its cream texture is ideal for installations with other cables inside.

Non-toxic, non-flammable, no glue effect, bio-degradable.

Usage

Apply the lubricant on cables and at the entrance of the pipe. It is easier by using a sponge. During penetration lubricant will be distributed within the pipe, easing penetration. Water will evaporate and remaining lubricant will stay for a long time. With air cable laying equipment, it may also be used to pre-lubricate the pipe.

Product Packaging Dimensions

- Bottles of: 0,5kg, 1kg
- Buckets: 25kg
