

Overview

Optical air" is a lubricant for power, telecom and fiber optic cables reducing friction during installation up to 80%.

Is a non-toxic semi-liquid, easy to apply even in vertical installations due to its texture and stay on cables even after long time. It has no glue effect after evaporation.

Usage

Regarding fiber optic cables it can be used when installation is by air machines systems (blowing machines). Apply the lubricant on cables with a sponge ball. After dehydration lubricant will remain on cables, even after long time, easing the installation of other cables.

It can be also use to pre-lubricate plastic ducts before fiber optic installations.

Product Packaging Dimensions

Buckets: 10kg, 25kg, 50kg

(Art. No)

100-50-525

-10°C - +50°C
Safe temperature

Bio-degradable

Non-flammable

Non-toxic

Features	Mean
Color	white
Texture	semi liquid
Smell	None
Viscosity	2.000 ± 100 cps
PH	7 neutral
Specific weight	gr/cm ³ 1
Temperature	-10- +50° C
Flammability	Not flammable
Biodegradability	bio-degradable
WKG	1 (according to 2000 German and British standards)
Toxicity	non-toxic
